Simplifying the questionnaires: evaluation of a new questionnaire for low back pain patients. A new low back pain (LBP) questionnaire was developed to test the quality of the newly developed LBP questionnaire, termed the Simplifying Chronic Low Back Pain questionnaire. The objective of this study is to examine the reliability and convergent validity of the Simplifying Chronic Low Back Pain questionnaire, with a comparison of its performance with the commonly used Chronic Low Back Pain Questionnaire. A sample of LBP patients seen at two hospitals completed a questionnaire designed to determine how they perceive their pain. The sample was divided into two groups: exploratory group (n = 84) and validation group (n = 26). The results indicate that the Simplifying Chronic Low Back Pain questionnaire offers the same level of reliability and validity as the Chronic Low Back Pain Questionnaire. In addition, the Simplifying Chronic Low Back Pain questionnaire takes less time to complete. Although further testing of the Simplifying Chronic Low Back Pain questionnaire with other patient groups is recommended, we believe that the Simplifying Chronic Low

FIFA World Cup 2006 is a football video game developed by EA Sports and published by Electronic Arts for the EA FIFA World Cup 2006 is a football video game developed by EA Canada and EA Sports and published by Electronic Arts for the EA[Effects of the laryngeal mask airway on patient-controlled analgesia in general anesthesia for pediatric adenotonsillectomy]. To evaluate the effects of laryngeal mask airway (LMA) on patient controlled analgesia (PCA) in pediatric anesthesia. Fifty ASA I-II pediatric patients undergoing elective adenotonsillectomy (male 14, female 36) under general anesthesia were randomly assigned to receive anesthesia without LMA (group A, n=25) or with LMA (group B, n=25). Patients in each group received anesthesia using propofol for induction, fentanyl and vecuronium bromide for muscle relaxation, and oxygen-air for maintenance, respectively. Postoperatively, patients in group B received PCA through LMA, patients in group A received PCA through nasotracheal tube. Postoperative pain assessments were performed at 0, 1, 2, 3 and 4 h after surgery, and the following indexes were compared: pain scores, analgesia-related indexes, respiratory depression-related indexes, recovery time, and complications. At 0 h after surgery, the pain scores of patients in group B were significantly lower than that of those in group A (P f678ea9f9e
